IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER SERVICE LINES in 2026

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

Lupin Lodge failed to complete an initial service line inventory by the deadline as required by U.S. EPA.

Our water system recently violated a drinking water requirement. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we have done to correct this situation.

Lupin Lodge was recently required to conduct an inventory of all water service lines, which is the pipe that connects your home, building, or other structure to the water main. The purpose of the inventory is to identify the material of these service lines and fittings, including the customer-owned side of the water service line.

Lupin Lodge should have completed the inventory by October 16, 2024, but it did not. As a result, the pipe that connects your home, building, or other structure to the water main was not identified by the deadline and is considered an unknown material. Lead service lines or certain galvanized pipe can potentially place you at risk for exposure to lead. Therefore, your service line material will need to be identified.

Lupin Lodge routinely monitors for lead in the distribution system and the most recent water sample results received in June 2025 showed that the 90th percentile of all lead levels measured in the distribution system do not exceed the action level of 0.015 mg/L for lead.

The action level for lead in drinking water is 0.015 milligrams per liter (mg/L) or 15 micrograms per liter (µg/L).

What should I do?

- This is not an emergency.
- Your water is safe to drink and meets federal and state safe drinking water standards.
- You do not need to use an alternative water supply (e.g., bottled water).

What is being done?

The initial service line inventory for Lupin Lodge (CA4300716) submitted on 4/30/2026 has been reviewed and approved. A copy of the inventory has been printed and is also available for view online at: https://www.lupinlodge.com/water/

Lead Related Health Information

- *Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can cause new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.*

- If you have concerns about your water quality, the State Water Board's Environmental Laboratory Accreditation Program has a map of laboratories that can test your water at the consumer's expense, which can be found at: *https://www.waterboards.ca.gov/drinking_water/certlic/labs/*

- If you still have health concerns from potential lead exposure in your drinking water, there are point-of-use (POU) devices that can be used on your drinking water taps to provide an additional barrier of protection. A list of these residential treatment devices can be found at: *https://www.waterboards.ca.gov/drinking_water/certlic/device/watertreatmentdevices.html*

- If you have other health issues concerning the consumption of this water, you may wish to consult your health care provider.
